

Reliable power protection

FROM MEISSNER

Meissner Uninterruptible Power, a division of ALSTOM Electrical SA Pty Limited, provides essential power solutions on a turnkey basis to a wide range of markets where power interruption is not an option. One of the lines supplied and supported by Meissner is the Eaton Powerware range which ensures performance and reliability for critical applications.

POWERWARE 9370

The Powerware 9370, with its robust design, efficiently protects against all nine of the most common power problems that threaten any system. It can operate in many different environments ie, industrial controls, manufacturing machinery, process equipment, transportation, security, telecommunications, large computer systems, server and data centres.

Competitively priced, and with **patented** additional options (HotSync and ABM), the 9370 combines compact design with the most advanced functions and technology. Full 'double conversion', online topology, ensures that the UPS provides complete isolation from all incoming utility and generator-related power problems. This produces the highest level of protection to the critical load.

Product highlights include:

- Hot Sync for high availability.
- Complete digital controlling, using CAN bus technology (typically for harsh environments).
- Excellent output voltage stability, ideal for 100% step loads, also unbalanced and non-linear loads.
- Internal static and manual bypass.
- Inherent reliability through distributed control, power supply and cooling system redundancy.
- Easier maintenance with front access for installation and service.
- Software suite with full compatibility.

POWERWARE 9155

Powerware 9155 is a Series 9 UPS and is designed to protect 0,9 pf rated critical computers and servers. It features active input power factor control (PFC) and low 2 to 5%THD(i) with IGBT rectifier technology. Typical applications would be modern servers and computers, critical infrastructure and security systems, telecommunications, industrial automation equipment, banking and healthcare systems.

Product highlights include:

- Hot Sync for high availability and redundancy.
- Advanced Battery Management (ABM) to significantly prolong battery life. Active input power factor correction.
- High 0,9 pf output rating for non-PFC and PFC server loads.
- Graphical LCD display with user configurable menus.
- Web/SNMP and Modbus monitoring capability.
- Software suite bundled.
- Supports 100% modem IT loads with leading power factors.

POWERWARE 9390

Powerware 9390 provides unmatched power performance for input harmonics, efficiency and output power factor. It's scalable for capacity and redundancy to meet the future and present power needs. Powerware 9390 provides peace-of-mind and resolves all utility power problems within data centres, server farms, building, banking and telecommunication systems, industrial automation equipment and healthcare systems.

Product highlights include:

- High efficiency – up to 94%.
- Hot Sync for high availability.
- ABM to significantly prolong battery life.
- Active input power factor correction providing up to 3 to 5%THD(i) harmonics.
- High 0,9 pf output rating for non-PFC and PFC server loads.
- Web/SNMP communication offered as standard or optional.
- Graphical LCD display with user configurable menus.
- Built-in mechanical bypass switch (40 to 80 kVA).
- Supports 100% modem IT loads with leading power factors.

All Meissner's products are backed up by a fully trained technical staff compliment standing by countrywide to keep mission critical equipment online 24/7/365.
