

The HellermannTyton

Mindbender?

An impossible win

Little Johnny was delighted when his two older cousins came to visit because they were both strong chess players, much stronger than Johnny, and he was keen to improve his game. He also had a trick up his sleeve. After they had played a couple of games and Johnny had lost badly, he suggested he play them both at once.

In other words, he would play two games at once, one against each of them. They thought this was a strange idea because Johnny would obviously lose even more

badly than usual. But Johnny insisted that he would win one of the games, or at least get a couple of draws, and so they agreed.

Sure enough, after a few moves, it was clear that Johnny had a winning position on one of the boards, although he was losing on the other, and his cousins admitted – amidst much laughter – he had been right all along.

How did Johnny do it? How could he be sure of doing so well?

Solution to April 2008 mindbender

Think of a number

When Jane asked Peter, "What are the remainders when you divide (your number) by five and nine?" and Peter replied, "One and three", Jane naturally thought that 'one' was the remainder when Peter's number was divided by five, and 'three' was the remainder when it was divided by nine.

But Peter was being devious. He gave Jane the answers she asked for, but in the wrong order. So, the remainders when Peter's number was divided by seven, five and nine, were three, three and one, respectively, and Peter thought of 73.

Winner

Mohammed Zain from Atlantic Distributors in Booyens.

Competition rules:

Answers must be written in block capitals on the coupon provided and entries must be posted, faxed or e-mailed to arrive no later than **7 July 2008**.

The first correct entry drawn will receive the Toptronic Digital Clamp Meter TBM3030 AC Clamp (600 A) with enhanced features from HellermannTyton. No correspondence will be entered into and the decision of the organisers will be final.

No staff members of Crown Publications or their families may enter.
